

**QR19**

---

Reticle Manual

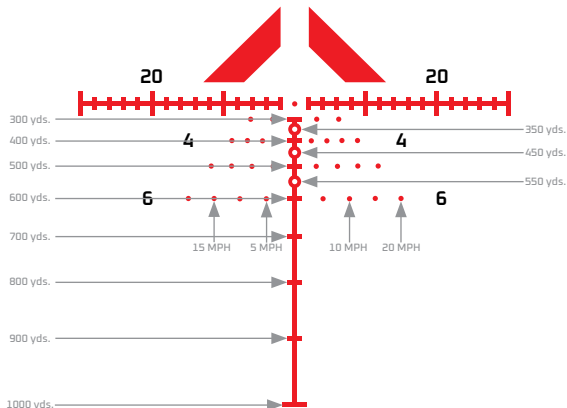

## QR19 RETICLE KEY DIMENSIONS

Bullet Drop Compensating (BDC) reticles are designed to get rounds on target quickly. Distances will be approximates, and will change depending on the gun, load, and environmental conditions. Using the MDA values for each hashmark, you can figure out exactly where your specific load will line up with each hashmark. You are not limited to using a .223/5.56mm. The QR19 reticle is a first focal plane reticle; therefore, all the hashmarks will be true throughout the entire magnification range.

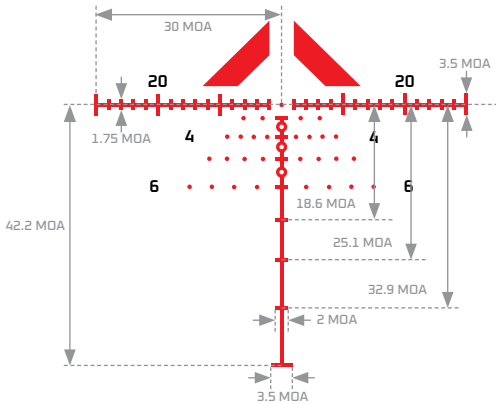

### BULLET DROP INFORMATION BASED ON .223/5.56MM LOADS

.223/5.56mm, 62 gr., 2991 FPS Muzzle Velocity

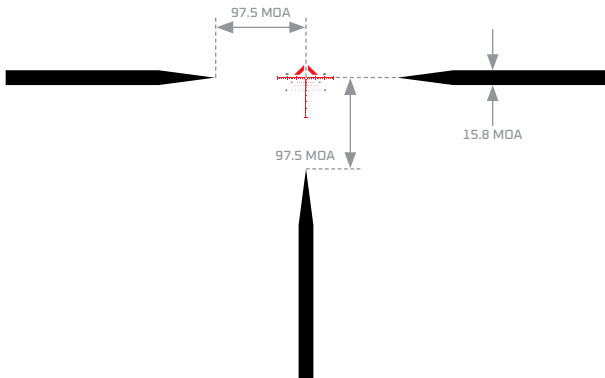

(Main crosshairs zeroed at 50/200 yds.)

## QR19 RETICLE KEY DIMENSIONS

**QR19 RETICLE**

Designed to provide all the info a shooter needs and none of the info they don't, the QR19 reticle excels for CQB shooters. Clearly defined outer bars drive the shooters eyes toward the center dot allowing for quick shot engagement while fine aiming points on the tree allow for precise shots at further distances with the BDC tree.

See **PAGES 3-5** for more detailed dimensions.
